

Four of the 35 bronze rings found at Glastonbury. The biggest ring had a diameter of 34 mm. The others have diameters of 21.5mm, 16.7 mm and 12 mm.

Five orange-coloured amber beads and 24 glass beads were found. Most of the glass beads were plain blue but some were blue and white.

A set of bone beads were linked together to make a necklace.

A

Many iron objects were found and some still had wooden handles attached. They included a dagger, knives, a saw and a bill-hook used in farming.

B

Combs made out of antlers. There were used to make cloth by pushing the threads tight together which made stronger cloth.

C

This quern stone was one of a pair of stones which sat one on top of the other.

Corn was put between the two stones and then the top stone was moved round in a circle to grind the corn very small so it could be used to make bread.

D

A bronze mirror and a bronze bracelet. You can see the hook and eye used to close the bracelet.

E

This bronze bowl had been repaired several times and was probably made in the village.

F

Over 5000 pieces of pottery were found. Some of pots were plain but others were decorated using the end of an antler to make the designs.

G

Many needles made from bronze, bone and antler were found in the village.

Toggles made from antler and bronze safety pins were used to fasten clothes.

H

Many wooden objects were found including these ladles, wheel spokes and a tub that might have held water, butter or milk.
